27 Tech Startups across Asia Register for 8th Asian Entrepreneurship Award

Progressive tech startups from 14 countries & regions in Asia seeking opportunity for open innovation in Japan

(Chiba, September 19th) The Asian Entrepreneurship Award (AEA) Steering Committee announced today that it will hold the [Asian Entrepreneurship Award 2019](#) (AEA 2019) from October 30th to November 1st at Kashiwa-no-ha campus city in Chiba prefecture, Japan. This marks the 8th event of the AEA program, which was launched in 2012, and 27 progressive tech startups from 14 countries and regions from all over Asia have submitted entries this year.

*Full list and business outline of AEA2019 entrants: <https://aea.events/e/startup-entrants/>

During the event, entrants will be evaluated on their innovativeness, the commercial viability and social impact of their products and services, and the potential for collaboration with major Japanese corporations. The winners will receive awards of up to 3 million JPY along with other business-support services to assist their entry to the Japan market.

This year, Nikkei Inc., the largest economics newspaper in Japan, and Microsoft Japan Co., Ltd joined AEA as special sponsors, and over 20 other major companies in and outside of Japan are also sponsoring the event to enhance the contents that will better support the growth of participating startup companies.

Tech Startups from Asia gather at Kashiwa-no-ha area

■ AEA to attract tech startups to further bolster innovation in Asia

According to a recent report, the value of Asian unicorn startups is equal to 40% of the global total, and six out of the top ten are from China.¹ In recent years, the number of unicorn companies with valuations of \$1 billion or more is growing also in other parts of Asia, including India and Indonesia.

Leveraging this growth, AEA was launched in 2012 as an annual international business pitch event for startups across Asia, aiming at the formation of an “ecosystem” that generates innovation through collaboration among industry, government and academia. Since its launch, 154 tech startups from 15 countries and regions in Asia have participated in this opportunity to showcase their business ideas for tackling social issues.

Throughout the three-day event, AEA will offer not only the opportunity for entrants to pitch their solutions, but also mentoring sessions and various learning components such as keynote sessions by renowned speakers will be provided. Participants will also be offered a study tour of top academic institutions and the National Cancer Center Hospital East located in the AEA host city of Kashiwa-no-ha in Japan’s Chiba prefecture, one of the rapidly globalizing “smart cities” attracting people from around the world with the aim of creating new industrial culture.

From this year, Kashiwa-no-ha area will also be positioned as a testing field for participating startups to demonstrate their products and services, thereby helping to realize AEA’s vision of evolving as an innovative platform for all countries across Asia.

List of Startup Entrants

Startup Name	Country	Category
Crowdrender	Australia	IoT
The company offers shared access to computing environment generated by underutilized computers..		
Langzou Technologies	China	IoT
The company builds digital twin solution platform equipped with IoT solution which utilizes cutting edge 3D vision and CG technologies. This solution enhances the efficiency of space management on various levels, from individual building to urban landscape.		
Microblue Intelligence	China	AI
Microblue Intelligence is a tech company which provides industry-wide AI image analysis technology. The company offers flexible and rapid customer services based on its core technologies including target recognition, defect detection, and visual classification.		
Cavli Wireless	India	IoT
Cavli Wireless is an IoT building block provider, bringing together connectivity, application processing capability and data management into one single platform called Cavli Hubble. The company contributes to promotion of IoT product makers around the world by connectig of smart modules more safely, easily and rapidly.		
Examly (The brand of Pineaxe Technologies)	India	AI
Examly is an AI powered educational platform, especially designed to teach coding and programming skills. Examly provides customized learning path for each student and adapts the practice exercises at their own pace. The platform is currently used by 100+ top universities, with more than 60000+ learners across India.		
PT. Inovasi Bioproduk Indonesia	Indonesia	Medical
The company produces hard capsule made from Indonesian seaweed. For animal gelatin is usually the main ingredients for hard capsules, Indonesian seaweed, the country’s leading product, provides important alternatives for people with dietary restrictions.		
Algal Bio Co., Ltd.	Japan	Healthcare
Algal Bio Co., Ltd., a biotech startup, was established based upon 20 years of research at the University of Tokyo. The company possesses around 3000 algae strains, from which the company extracts substances to make functional foods (health foods and supplements), cosmetics, functional beverages, natural additives, medicines and biofuels, etc.		
Exergy Power Systems, Inc.	Japan	IoT
As the global power system increasingly adopts renewable energy, Exergy Power Systems, Inc. provides services that prevent sudden fluctuations of the electricity generated from renewable resources. The company provides unique IoT solution that utilizes storage battery technology to stabilize the renewable power system, thereby preventing energy losses.		
Hachi Tama Inc,	Japan	IoT
The company produces “Toletta®,” a smart IoT cat litter box that separates urine and feces and detects any abnormalities such as chronic kidney disease which may otherwise unnoticeable without such technology.		
Metcela Inc.	Japan	Medical
Metcela develops an efficacious cell therapy, “VCFs” or VCAM-1-positive cardiac fibroblasts, which treats heart failure. Its main function is to modify the microenvironment of the infarcted heart to promote survival and proliferation of pre-existing cardiac cells.		

Wish- Alize Co.Ltd.	Japan	Medical
The company tackles the issue of medical device traceability. By providing a quantitative evaluation system that not only entails "Identification of individual surgical instrument," but also features "evaluation of surgical instrument condition"- such as cleanliness, functionality and deterioration- the technology enables the surgeons to avoid surgical site infections.		
FUTURUN TECHNOLOGIES	Malaysia	Healthcare
The company develops "Smart Intelligent Materials", that possesses the materials that can stabilize blood pressure, such as non-radioactive alpha, beta and gamma rays, non-toxic, non-conductive, non-migrating and non-magnetic properties. Through its unique chemical interaction of the impregnated materials in the plaster, it emits a low-frequency vibration to the blood, thereby improving its circulation.		
SmartPeep Pte Ltd	Malaysia	AI
SmartPeep provides better elderly care with AI. The company offers virtual elderly-sitter systems to monitor and better respond elderly who are at risk and in need of help. It also helps caregivers by reducing their care burdens.		
AWARE GROUP	New Zealand	AI
In 2019, Aware Group released Aware Cognitive Platform (ACP), the first Software-as-a Service product which supports companies through number counting, automatic number plate recognition, and voice classification technologies.		
uHoo Pte Ltd	Philippine	IoT
The company provides solution to assess various parameter of the aerial environment and realizes a cleaner indoor air with automatic air conditioning adjustments. The solution is applicable not only for residential uses, but also for business complexes and offices.		
MOTORICA LLC	Russia	Healthcare
MOTORICA LLC. adds new value to prosthetic arm through online transaction and voice-controlled command functions. In addition to rehabilitation program, the company aims to accelerate the integration of prosthetic arm users' into the IT market.		
Warden Machinery/Machine Vision LLC	Russia	AI
Warden Machinery is a Russian-based startup, specializing in machine vision-based solutions, including but not limited to human behavioral analytics, visual defects detection in complex engineering systems and conveyor manufacturing, and real-time vision systems for industrial robots based on AI.		
UNIM	Russia	Healthcare
UNIM's Digital Pathology© system enables highly specialized consultants worldwide to remotely meet with their patients online and perform real-time case analysis and diagnostics.		
Advent Access Pte Ltd	Singapore	Medical
Advent Access is a medical technology startup focused on end-stage renal disease management. A Stanford StartX company and spin-off from A*STAR, the company's mission is to pioneer innovations to significantly reduce dialysis cost and restore quality of life for kidney failure patients. The av-Guardian™ forms a key component of Advent Access' dialysis-machine agnostic platform to empower patients to perform hemodialysis independently, safely and more affordably - at home or in novel care environments.		
BioCheetah Pte Ltd	Singapore	Medical
BioCheetah Pte Ltd is a Singapore-based, A*STAR-IMCB spin-off diagnostics company. With the use of uniquely developed biomarkers and detection antibodies, it successfully launched a bladder cancer application.		
Acumen Research Labs	Singapore	Medical
The company developed AcuSept™ -- a novel, blood-based Sepsis Host Response test using sepsis-specific mRNA biomarkers -- that can assist the doctors to detect sepsis faster and more accurately than current methods.		
Ministry of Movement Pte Ltd (aka SWAT)	Singapore	AI
Responding to the rising need of large-scale on-demand ride sharing, the company provides a world-class routing engine that uses customer's real-time geolocation to adjust car routes on the move. It is now installed in Singapore and Sydney, and will extend to various Asian cities in the future.		
ALI Co., Ltd.	Korea	AI
Artificial Language Intelligence (ALI) Co., Ltd. offers text summarization and chatbot solutions through deep learning based on natural language processing technology. The solution accelerates the automation of communication services such as customer call centers.		
AcroViz Inc.	Taiwan	Healthcare
AcroViz develops novel imaging biomarkers to prolong human health span and aims to end dementia. The company adopts diffusion Magnetic Resonance Imaging (MRI) and Machine Learning techniques, which are effective in predicting the risk and prognosis of dementia, such as Alzheimer's Disease (AD).		

Rehab Happy Walk	Thailand	Medical
The company tackles the issue of Parkinson disease (PD) which affects millions by causing walking difficulties, high risk of falling, fear, and depression. Based on proven clinical research, the company developed a rehabilitation solution to combat PD.		
System Stone Company Limited	Thailand	IoT
System Stone specializes in industrial technology in the context of evolving along with the Industry 4.0 trend. The company developed a mobile machine maintenance and management software application, through which full transfer and control of maintenance engineering tasks can be regulated. It ensures effective schedule management and predicts future machine malfunctions.		
Minet	Vietnam	AI
Minet is a technology company in marketing field, building a platform that connects brands that seek to leverage influencers to advertise their products via SNS. The platform enables brands to analyze followers' demographic with Big Data AI and optimize campaign effectiveness.

About AEA

The Asian Entrepreneurship Award (AEA) is an annual international business pitch event for startups across Asia, aimed at forming an ecosystem that will generate innovation through collaboration among industry, government and academia. Since 2012, young entrepreneurs from over 16 countries and regions in Asia have gathered in Japan to present their innovative ideas to leverage knowledge and technology to tackle challenges in the fast-growing Asia region. AEA is hosted at Kashiwa-no-ha Campus in Japan's Chiba prefecture, a rapidly globalizing smart city that attracts people from around the world aiming to pursue the creation of a new industrial culture.
